

Train your race robot

- Players start with a blank slate, training happens on-device in-app
- Train by tweaking the rewards given for actions eg, hitting a wall, hitting a competitor, completing a lap, forward speed, lap progression
- Run training and sit back and watch as they learn. From blank slate to competently completing a circuit takes around 5 mins

Race Challenge Opponents

The image is a collage of five screenshots from a racing game, each featuring a different opponent robot:

- Tortoise:** A slow-moving green and brown tortoise-like robot with a large front wheel and a smaller rear wheel.
- Jet:** A grey jet-powered vehicle with orange flame boosters on its sides, emitting a bright yellow glow.
- Weavel:** A red, white, and blue racing car with a star pattern on the wheels, performing a sharp turn on a track.
- Rhino:** A purple rhinoceros-shaped robot with large white tusks, shown crashing into a barrier.
- K2999:** A dark grey, futuristic-looking truck or van with a large front grille and a single headlight visible.

Tortoise

Slow and steady your first hurdle a simple trained AI can beat

Jet

Turbo boosting jet packs is this racer's special power

Weavel

Protects his racing line by aggressively weaving, can you find a way past?

Rhino

Aggressive and pushy, waiting for you to come near then crushes you into a barrier

K2999

Slick and well trained, an AI that's all about the racing line
